Brownsboro Road lane closure begins September 5

Traffic will reduce to one lane on Brownsboro Road between Mellwood and Story avenues beginning September 5, 2017. All traffic in this one-way area will divert to the left lane. No street parking will be permitted in this section of Brownsboro Road during construction, which is scheduled through March 2018.

This work is part of MSD's Force Main Extension Project for the Clifton Heights Combined Sewer Overflow (CSO) Basin.

Background

The Clifton Heights CSO Basin will capture 7 million gallons of combined sewer overflow, in an average rainfall year. This underground-covered basin will offer the public and Beargrass Creek protection from combined sewer overflows during periods of wet weather. When completed, the project will be largely invisible to the public.

Underground storage is part of MSD's larger endeavor to prevent sewage from overflowing into Louisville's waterways. These underground storage areas retain the mixture of rainwater and sewage until the rain subsides and capacity is available, then gradually release it back into the sewer system.

About MSD

The Louisville/Jefferson County Metropolitan Sewer District (MSD) works to achieve and maintain clean, environmentally safe waterways for a healthy and vibrant community. The organization's more than 630 employees provide wastewater management, drainage and flood protection services across the 376 square miles of Louisville Metro. In addition to operating and maintaining Louisville Metro's sewer system, floodwall system, water quality treatment centers and flood pumping stations, MSD invests in hundreds of infrastructure improvement projects each year, plants more than 1,000 trees and other vegetation annually to enhance water filtration and reduce runoff, and provides numerous outreach programs to inform and educate the community about protecting our waterways.
