Cable Street—one-block closure begins September 20

Cable Street—between Bowles Avenue and East Washington Street—will be closed to traffic beginning September 20, 2017. This construction is estimated to continue to the end of January 2018.

Cable Street will remain open between Story and Bowles avenues, as well as north of East Washington Street at this time.

This work is part of MSD's Force Main Extension Project for the Clifton Heights Combined Sewer Overflow (CSO) Basin.

Background

The Clifton Heights CSO Basin will capture 7 million gallons of combined sewer overflow, in an average rainfall year. This underground-covered basin will offer the public and Beargrass Creek protection from combined sewer overflows during periods of wet weather. When completed, the project will be largely invisible to the public.

Underground storage is part of MSD's larger endeavor to prevent sewage from overflowing into Louisville's waterways. These underground storage areas retain the mixture of rainwater and sewage until the rain subsides and capacity is available for treatment, then gradually release it back into the sewer system.

About MSD

The Louisville/Jefferson County Metropolitan Sewer District (MSD) works to achieve and maintain clean, environmentally safe waterways for a healthy and vibrant community. The organization's more than 630 employees provide wastewater management, drainage and flood protection services across the 376 square miles of Louisville Metro. In addition to operating and maintaining Louisville Metro's sewer system, floodwall system, water quality treatment centers and flood pumping stations, MSD invests in hundreds of infrastructure improvement projects each year, plants more than 1,000 trees and other vegetation annually to enhance water filtration and reduce runoff, and provides numerous outreach programs to inform and educate the community about protecting our waterways.
